BIBLIOGRAPHIC INFORMATION

PB91-133611

Report Nos: none

Title: Environmental Research Geographic Location Index. A Report for the Environment.

Date: 1989

Performing Organization: Senate, Washington, DC.

NTIS Field/Group Codes: 68, 43F, 91A, 88E

Price: PC A08/MF A01

Availability: Available from the National Technical Information Service, Springfield, VA. 22161

Number of Pages: 173p

Keywords: *Environmental research, *Position(Location), *Indexes, Sites, States(United States), Foreign countries, Listings, Authors, Descriptive cataloging, Foreign technology.

Abstract: Numerous abstract services can be used to locate references on various environmental topics. Until now, however, there has not been an effective way to locate references on the environmental quality of specific locations. The location index consists of two parts. The first part provides a listing of references by the location in which the research was conducted. Locations are defined first by state (e.g., Kansas), by city or general location (Brown County), and then by specific location or place (e.g., Hiawatha Wastewater Treatment Plant). In many cases, the state or province was unknown to the individual compiling the index. The reader is urged to also check listings for nearby states. The second part of the index is a list of references in alphabetical order by author's last name.

PB91-133611

An Index of Scientific Research Articles
Published in 1989

ACKNOWLEDGEMENT

This index was compiled by the Office of Sen. James M. Jeffords, U.S. Senate, Washington, D.C., with the assistance of SpaceTrack, Inc., New York, New York. SpaceTrack, Inc. has granted permission for distribution of this index to members of the U.S. Senate and House of Representatives, to agencies of the U.S. Government, and to non-profit environmental organizations both for use in learning about the environmental quality of a specific area and for evaluating legislation introduced by Sen. Jeffords related to geographical indexing of environmental research. Questions regarding this index should be addressed to John Zirschky, Office of Sen. James M. Jeffords, 530 Dirksen Senate Office Bldg., Washington, D.C. 20510-4503.

Copyright has been applied for by SpaceTrack, Inc. Any reproduction of this publication or the information contained herein in any form for purposes other than described above is prohibited without the written consent of SpaceTrack, Inc. This restriction on distribution is for the purpose of preventing the republication of this index for commercial purposes.

NTIS is authorized to reproduce and sell this report. Permission for further reproduction must be obtained from the copyright owner.

DISCLAIMER

This document was prepared solely to provide an example index of environmental research articles by geographical location. No guarantee of the accuracy of the information presented herein is made or implied.

HOW TO USE THIS INDEX

Numerous abstract services can be used to locate references on various environmental topics. Until now, however, there has not been an effective way to locate references on the environmental quality of specific locations. Location is important for many reasons, such as:

assisting the public in learning about the quality of their environment,

making scientific research more accessible to the public and to other scientists,

collecting background information for environmental impact assessments,

correlating research between different scientific specialties, and,

determining changes of pollutants levels in an area.

This location index consists of two parts. The first part provides a listing of references by the location in which the research was conducted. Locations are defined first by state (e.g., Kansas), by city or general location (Brown County), and then by specific location or place (e.g., Hiawatha Wastewater Treatment Plant). In many cases, the state or province was unknown to the individual compiling this index. In these instances, the location is listed as not specified or not specific. The abbreviation is also used in instances where the location of a site would be difficult to specify such as the great lakes when not refering to a specific shoreline or samples collected from the middle of the Atlantic Ocean.

The reader is urged to also check listings for nearby states. Rivers, for example, often form boundaries between states. The Columbia River may be listed under either Washington or Oregon state depending upon the author's point of reference. Another example is the Chesapeake Bay which is listed under Maryland and Virginia. Finally, the specific location was often very difficult to site; either because the author omitted a detailed description or because the location is itself vague (e.g. unspecified metal reclaimer in Chicago). Individuals more familiar with a local area may recognize facilities that the author was unable to identify.

The second part of this index is a list of references in alphabetical order by authors last name. Once an author's name has been identified to be of particular interest from part one, the corresponding reference can be obtained from part 2 (beginning on page 39). The author's name, the first approximately 65 characters of the article title, and the source, volume, and first page of the reference. A reference librarian can assist you in obtaining copies of these references.

A final word of caution is that just because an area is listed in this index, one should not infer that an area is contaminated. In some instances, an area was used only to collect animals that were later subjected to tests in a laboratory. The location from which the animals were collected is listed so that other researchers could see how, for example, fish from a local stream might react to temperature stresses. Users of this index are urged to use caution before ordering the references listed herein, as titles of scientific papers do not always described the contents of a paper, particularly when the titles have been shortened for the purposes of this index. No guarantee is made or implied that the references listed herein will provide information of interest to a particular user, or that errors in cross-referencing have not occurred.

SOURCES REVIEWED

Forty-five journals and conference proceedings were reviewed to compile this index. A cross-section of journals related to air, water, and soil pollution; environmental monitoring, contamination, and assessment; water and wastewater treatment, air pollution control, and hazardous waste management; and industrial pollution control in the food, pulp and paper, and chemical industries. Comments from users of the index as to reference sources are welcome. Omissions of articles from these sources may have inadvertently occurred. No guarantee is made as to the accuracy of this index.
